BLESSON REJI

Bengaluru, Karnataka | +91-8431695277 | itsbless24@gmail.com | LinkedIn | GitHub

Summary

BCA Graduate specializing in Python, Django, and full-stack web development. Proficient in database modelling and RESTful API architecture. Seeking academic credit mapping based on a 90-hour technical internship at HOPE Foundation, where I successfully designed, developed, and defended an independent software project.

Technical Skills

Web Framework: Python (Django)
Frontend Development: HTML, CSS, JavaScript
API Development: Django REST Framework (DRF)
Database: PostgreSQL, SQLite, Redis
Version Control & DevOps Tools: Git, GitHub, Docker

Internship

Project Intern (Web Development) | **HOPE Foundation**
March 2026 – May 2026
Project Deliverable: Portfolio Analyzer (AI integrated Web System) | **GitHub Repo**

- Developed a Django-based financial management system to track real-time stock and cryptocurrency assets, log user transaction histories, and manage automated price alert boundaries.
- Architected an AI-powered insights module integrating **Large Language Models (LLMs)** to automatically generate data-driven portfolio analytics and predictive risk suggestions.
- Built a PostgreSQL-backed cache (Django DatabaseCache) for stock data and a custom **rate limiter** on login and AI-chat endpoints to reduce API calls and protect against abuse.
- Wrote **140+ automated tests** (Django TestCase) covering models, views, forms, price-update logic and rate limiting.
- Added transaction **CSV and PDF export**, daily portfolio snapshots, and a watchlist, with production security settings (HTTPS redirect, HSTS, secure cookies).

Academic Projects

Campus Ink | Python, Django, SQLite3, HTML, CSS, JavaScript | **GitHub Repo**

- Developed a full-stack blogging and content publishing platform enabling students and academic institutions to write, publish, and manage blog posts and academic articles.
- Built role-based user authentication distinguishing student authors from institution administrators, controlling publishing and content-moderation permissions.
- Modeled relational data in default SQLite3 for posts, comments, categories, and user profiles to support efficient querying and content organization.

AquaMind | Python, Django, Django REST Framework, SQLite3, HTML, CSS, JavaScript | **GitHub Repo**

- Built a smart water management system that processes water usage and quality data to generate severity-based insights, flagging situations by priority level (e.g. normal, moderate, critical).
- Designed backend logic to classify and prioritize alerts based on situation severity, supporting proactive rather than reactive water resource management.
- Developed REST APIs to serve real-time insights and historical trends to a dashboard interface for monitoring water usage patterns.
- Structured and managed application data in PostgreSQL for scalable storage and efficient retrieval of monitoring records.

Education

Bachelor of Computer Applications (BCA) *2023 – 2026*
Government First Grade College Hebbal, Bengaluru | CGPA: 8.7

Certifications

- GenAI Powered Data Analytics Job Simulation – Tata Group (Forage)
- Deloitte Data Analytics Job Simulation – Forage (2025)
- Granite Models for Software Development – CSRBOX (2026)
